What's New

As your elevator provider, it is our responsibility to maintain and store complete records of the services we provide. Monthly maintenance, service calls, repair work, and inspections are just a few of the items we keep track of. We are in the process of implementing a new program that will allow us to advance our record keeping system and be able to offer accurate and complete information that is readily available. We have started to test the new program with a few of our mechanics and the results thus far have been amazing. As we continue to utilize this program, please provide us with any feedback. Not only do we want to be more efficient, but we want all of our customers to experience the benefits as well.

Did You Know

The state of Delaware now requires that every elevator mechanic obtain an Electrical License. To receive this license, our mechanics have to pass a test reviewed by as-

signed board members. Any person that performs electrical work or works on equipment that involves electricity must have this license.

Helpful Tip

The summer months are quickly approaching bringing the heat to your machine rooms. Every year around this time, the amount of service calls we receive increases as a result of the increased temperatures. When the temperature in the machine room rises so does the temperature of the oil, controller, and other critical components. It is important to maintain an ambient temperature in the machine room to ensure that your elevators continue to operate properly. There are several methods available to keep these rooms cool. If you currently do not have temperature control in the machine room please talk to your mechanic, or give us a call. There are simple, inexpensive options available that will save you time and worry in the end.
